AI as Assistive Technology: Opportunities, Challenges, and Real World Implications

Presented by Andrew Harnish, PhD

Learning Objectives:

- Participants will develop an understanding of basic concepts in generative artificial intelligence (AI).
- Participants will identify practical ways AI can support individuals with disabilities in daily living, communication, and learning.
- Participants will understand the challenges AI tools pose to people with disabilities, including cost and bias.
- Participants will develop strategies for evaluating appropriate AI tools based on individual needs, environmental contexts, and available resources.
